# African Organic Agriculture Training Manual: Knowledge Shall Help Make Farmers More Fit for Business

**(Frick/Nuremberg, February 16, 2012) Switzerland's Research Institute of Organic Agriculture (FiBL) today presents its African Organic Agriculture Training Manual at the event "Unleashing Africa's Organic Export Potential", taking place at the Biofach Trade Fair in Nuremberg/Germany. The presentation at the world's largest organic trade fair underlines FiBL's goal to improve access of African farmers to markets, especially to the organic market. Organizations involved in training in organic and sustainable agriculture in Africa are invited to test the new training materials and contribute to their further improvement.**

Organic agriculture can provide attractive options and improvements for African farmers and local economies. FiBL and partners from the African organic movement have created an illustrated training manual and a comprehensive online directory of organic agriculture in Africa to support smallholder farmers in implementing organic farming techniques, improving sustainability of agricultural production and increasing market opportunities. The partners include the International Federation of Organic Agriculture Movements (IFOAM), the African National Organic Agriculture Movement (NOAMs) and agricultural experts from across Africa.

"Experts from our institute worked with African specialists to produce a manual of agricultural best practices for growers, farmer groups and extension workers", explains FiBL project leader Lukas Kilcher. "One of our goals is to increase profitability for farmers by promoting improved technologies for organic production and market-driven organic production systems, that help make farmers more fit for successful business. The training materials will encourage application of sustainable soil management, resource-efficient farming and modern marketing techniques."

EXCELLENCE FOR SUSTAINABILITY

### **A contribution to food security**

“Critical, but enthusiastic teachers, advisors and farmers are today’s prime movers of agricultural development in Africa”, says FiBL Director Urs Niggli. “We are delighted to contribute our expertise to their efforts to promote sustainable farming practices with a growing number of research and extension activities.”

“This publication’s goal is to increase the sustainable agriculture options for African smallholders, and to help them become more successful farmers”, adds Niggli. “Our project contributes to food security in Africa by promoting improved production methods and strengthening market-driven farming systems.”
